Skills

Languages: JavaScript | Java | Python | TypeScript | Swift | HTML | CSS | NoSQL | Git
Frameworks: React.js | React Native | Angular | Node.js | Express.js | Ionic | Capacitor | RxJS | SwiftUI | UIKit
Tools & Platforms: Postman | Vercel | Render | VS Code | Xcode | GitHub

Experience

IT Consultant/Software Engineer, Nofugi – Miami, Fl August 2025 – Present

- Consulted with clients to identify technical requirements and developed product outlines defining software features that are best tailored to their needs.
- Developed frontend interfaces and application features for mobile apps and websites using React, React Native JavaScript, TypeScript, HTML, and CSS, integrating REST APIs and AWS services.
- Designed & developed 10+ REST microservice APIs using Node.js and Python to support web and mobile applications.
- Conducted functional testing, debugged application issues, and managed deployment workflows to ensure software quality and reliable releases.

Full-stack Engineer Intern, Tekin Software – Miami, Fl May 2025 – Aug 2025

- Coded Angular front-end features and API functionality for a dating application supporting the collection and processing of profile data for hundreds of thousands of users.
- Independently designed and developed an analytics dashboard to visualize and analyze application data, translating collected user information into actionable insights to inform the product team.
- Collaborated on a mobile hotel-key software initiative with an international development team, participating in daily technical meetings and outlining a system designed to replace physical room keys with mobile credentials.

Captain, Contessa Ristorante – Miami, Fl Feb 2023 – June 2025

- Spearheaded front-of-house operations during high-volume services, coordinating a team of servers and support staff to ensure smooth and efficient guest experiences.
- Managed floor plans, table assignments, and real-time guest flow for a 200-seat dining room using OpenTable, maintaining 4.8 star service ratings during peak covers.

Projects

Duel-Meet

- Founded a social meetup platform for trading card game players to find, host, and join local in-person games, solving the common problem of attending game stores alone.
- Engineered location-based game discovery using MongoDB geospatial queries, real-time messaging via RxJS polling, and a cascade account deletion system to maintain data integrity.
- Optimized friend and reputation systems, email-gated features, and game-specific chat lobbies, integrating Google Places API for location search and Resend for transactional emails.
- Released Duel-Meet as a Progressive Web App with Capacitor-ready Android and iOS builds, backend hosted on Railway.

Education

Florida International University – B.A in Computer Science Dec 2026
Florida International University – B.A in English Dec 2019
Relevant Coursework: Data Structures | Algorithms | Mobile iOS App Development | Artificial Intelligence | Database Management | Systems Programming | Database Management | Cloud Computing
