Skills

Languages: Java | JavaScript | HTML | CSS | Swift | SQL

Frameworks: Angular | Node.js | Express.js | Ionic | Capacitor | RxJS | SwiftUI | UIKit | Angular Material | Bootstrap

Tools & Platforms: Git | Postman | Vercel | Render | IntelliJ | VS Code | Xcode | GitHub

Experience

Full-stack Engineer Intern, Tekin Software – Miami, FL

May 2025 – Aug 2025

- Coded Angular front-end features and API functionality for a dating application supporting the collection and processing of profile data for hundreds of thousands of users.
- Independently designed and developed an analytics dashboard to visualize and analyze application data, translating collected user information into actionable insights for the product.
- Collaborated on a mobile hotel-key software initiative with an international development team, participating in daily technical meetings and collaborating on a system designed to replace physical room keys with mobile credentials.

Captain, Contessa Ristorante – Miami, FL

Feb 2023 – June 2025

- Spearheaded front-of-house operations during high-volume services, coordinating a team of servers and support staff to ensure smooth and efficient guest experiences.
- Ensured seamless service standards while managing floor plans, table assignments, and real-time guest flow using OpenTable software.

Projects

Duel-Meet

- Founded a social meetup platform for trading card game players to find, host, and join local in-person games, solving the common problem of attending game stores alone.
- Engineered location-based game discovery using MongoDB geospatial queries, real-time messaging via RxJS polling, and a cascade account deletion system to maintain data integrity.
- Optimized friend and reputation systems, email-gated features, and game-specific chat lobbies, integrating Google Places API for location search and Resend for transactional emails.
- Released Duel-Meet as a Progressive Web App with Capacitor-ready android and iOS builds, backend hosted on Railway.

Task Manager

- Built a full-stack task manager web app using the MEAN stack, featuring a secure login system, user authentication, AuthGuards, and dynamic task cards.
- Deployed frontend on Vercel and backend on Render, utilizing MongoDB Atlas for cloud-based data storage.
- Implemented a responsive UI with Angular Material, featuring a modern dashboard layout, hover interactions, and mobile-friendly design.

Education

Florida International University – B.A in Computer Science

Dec 2026

Florida International University – B.A in English

Dec 2019

Relevant Coursework: Data Structures | Algorithms | Mobile iOS App Development | Artificial Intelligence | Database Management
